

## GAP FILLER/ TRANSLATOR SYSTEM & LOW POWER TV UHF ANTENNA SOLUTION

Jampro Antennas, Inc. introduces the low power slot antenna for DTV Bands IV and V (470 to 860 MHz) Low purchase price coupled with outstanding performance allows stations a non-compromise performance antenna that meets the critical coverage needs of DTV, DVB-T/H and gap fillers.

This horizontally polarized UHF slot antenna developed to handle up to 0.70 kW DTV / DVB-T/H (average) or 1.0 kW analog (NTSC) input power. This product family was designed to be low weight and wind load so it can be used on many stations' existing analog towers with little or no structural changes. Installation can be side or optional top mount.

The JL-SS's outstanding bandwidth, stations are able to use the antenna right out of the box. Standard EIA input fittings assure fast, rugged and simple installation. The standard Omni azimuth pattern is provided. A standard 4 bay configurations of this antenna offers a gain of 7.79 times / 8.91 dBD.

### TYPICAL SPECIFICATIONS

<b>Frequency Range</b>	Bands IV/V (470-860 MHz)
<b>Operating Frequency</b>	Specify channel in this range
<b>Input Impedance/Type</b>	50 ohm / EIA Flange: 7/8" female
<b>VSWR</b>	1.10:1 or better

**Power rating 1kW**

**VSWR < 1.1:1**

**50 ohm impedance**

**Band IV & V (470—860 MHz)**

**Single channel**

### Construction

Thick wall aluminum tube, pure kydex overall radome and hot dipped, galvanized mounting bracket for up to 3" OD round member.
